

INDUSTRIAL MANAGEMENT SOLUTION

Visibility into network health and alerts in a single dashboard display.

Purpose-Built

Visibility into network health and alerts in a single dashboard. Trend analysis and customized views for improved decision making.

Responsive Design

Responds to user devices, wherever they are including in the field. Faster page loading speed and improved browsing experience.

Quicker & Smarter

Rapid remote provisioning, monitoring, and controlling of communication devices. Anticipates problems & audits device configurations.

Future Proof

Scalable and flexible to grow with your communications network. Provides automatic provisioning, monitoring and control of devices.

CENTRALIZED CONTROL

Monitor & optimize your industrial communication networks remotely

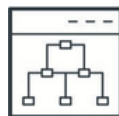

The Industrial Management Solution (IMS) is the best way for your company to gain visibility into all your network assets, with remote monitoring, automation, and control. Constant and efficient monitoring allows for remote troubleshooting, improved planning, and increased safety. The right data will keep your company competitive and future-proof.

- 1 Increased efficiency and accuracy of data collection
- 2 Visual sensors integrate into our IMS Distributed Endpoint Management (DEM) platform.
- 3 Valuable data in real-time to reduce downtime and maintenance planning

Our experienced support team is always on standby to answer any questions or resolve any technical issues.

A comprehensive tool for deploying & managing mission critical industrial wireless networks

INTEGRATED DASHBOARD

At-a-glance viewing & monitoring of entire network sensors and health on one screen

HISTORICAL DATA

Collect key performance indicators for trend analysis & planning

CUSTOMIZABLE VIEWS

Personalized feature access for each user based on their roles

CUSTOMER SERVICE

Efficient and friendly support from our software development team
